Note

A BT outbreak is only reported via ADIS if it is a **primary or secondary outbreak** in a disease-free Member State, a disease-free zone or a disease-free compartment. BT outbreaks in NON-disease-free areas, on the other hand, are reported by the Member States in an **annual report** to the European Commission and the other Member States and are therefore **not shown** in the ADIS on the date of the data query.

For this reason, the number of BT outbreaks in a Member State during the query period may be significantly higher than shown.
